

**IN THE CLAIMS**

1-8. (Canceled)

9. (Previously Presented) An Application Programming Interface (API), comprising:  
a platform-independent plug-in API including a wrapper;  
a browser plug-in API; and  
an intermediary between said platform-independent plug-in API and said browser plug-in  
API wherein said wrapper is used to connect said platform independent plug-in API to said  
intermediary, wherein said wrapper further comprises: an interface connecting an input stream  
interface of said platform independent API to said intermediary; an interface connecting an  
output stream interface of said platform independent API to said intermediary; an interface  
connecting a pluglet interface of said platform independent API to said intermediary; an interface  
connecting a pluglet factory interface of said platform independent API to said intermediary; an interface  
connecting a pluglet peer interface of said platform independent API to said  
intermediary; an interface connecting a first pluglet manager interface of said platform  
independent API to said intermediary; an interface connecting a second pluglet manager  
interface of said platform independent API to said intermediary; an interface connecting a pluglet  
stream information interface of said platform independent API to said intermediary; an interface  
connecting a pluglet stream listener interface of said platform independent API to said  
intermediary; an interface connecting a first pluglet tag information interface of said platform  
independent API to said intermediary; and an interface connecting a second pluglet tag  
information interface of said platform independent API to said intermediary.

10-17. (Canceled)

18. (Previously Presented) A method for implementing an API, comprising:

obtaining a platform-independent plug-in API including a wrapper;  
obtaining a browser plug-in API; and  
positioning an intermediary between said platform-independent plug-in API and said browser plug-in API wherein said wrapper is used to connect said platform independent plug-in API to said intermediary, wherein said wrapper further comprises: an interface connecting an input stream interface of said platform independent API to said intermediary; an interface connecting an output stream interface of said platform independent API to said intermediary; an interface connecting a pluglet interface of said platform independent API to said intermediary; an interface connecting a pluglet factory interface of said platform independent API to said intermediary; an interface connecting a pluglet peer interface of said platform independent API to said intermediary; an interface connecting a first pluglet manager interface of said platform independent API to said intermediary; an interface connecting a second pluglet manager interface of said platform independent API to said intermediary; an interface connecting a pluglet stream information interface of said platform independent API to said intermediary; an interface connecting a pluglet stream listener interface of said platform independent API to said intermediary; an interface connecting a first pluglet tag information interface of said platform independent API to said intermediary; and an interface connecting a second pluglet tag information interface of said platform independent API to said intermediary.

19-26. (Canceled)

27. (Previously Presented) A computer program product comprising:  
a computer usable medium having computer readable program code embodied therein  
configured to implement an API, said computer program product comprising:  
computer readable code configured to cause a computer to define a platform-independent  
plug-in API including a wrapper;  
computer readable code configured to cause a computer to define a browser plug-in API;  
and  
computer readable code configured to cause a computer to position an intermediary  
between said platform-independent plug-in API and said browser plug-in API wherein said  
wrapper is used to connect said platform independent plug-in API to said intermediary,  
wherein said wrapper further comprises: an interface connecting an input stream interface  
of said platform independent API to said intermediary; an interface connecting an output stream  
interface of said platform independent API to said intermediary; an interface connecting a pluglet  
interface of said platform independent API to said intermediary; an interface connecting a pluglet  
factory interface of said platform independent API to said intermediary; an interface connecting  
a pluglet peer interface of said platform independent API to said intermediary; an interface  
connecting a first pluglet manager interface of said platform independent API to said  
intermediary; an interface connecting a second pluglet manager interface of said platform  
independent API to said intermediary; an interface connecting a pluglet stream information  
interface of said platform independent API to said intermediary; an interface connecting a pluglet

stream listener interface of said platform independent API to said intermediary; an interface connecting a first pluglet tag information interface of said platform independent API to said intermediary; and an interface connecting a second pluglet tag information interface of said platform independent API to said intermediary.
